

Step Lift

Our **Step Lift** makes it easy to build an extra height without any impact on already existing steps, but which at the same time provides a natural environment for everyone. With an extra step of 275 mm depth that is easy to install together with the Tech Lift 500, it provides an opportunity for easier accessibility. **Step Lift** is both for outdoors and indoors, just like Tech Line 500 and all our other products. The step height in this combination is only for two steps and the highest step height on the first step should be a maximum of 225 mm high.
