

TECHNICAL BULLETIN

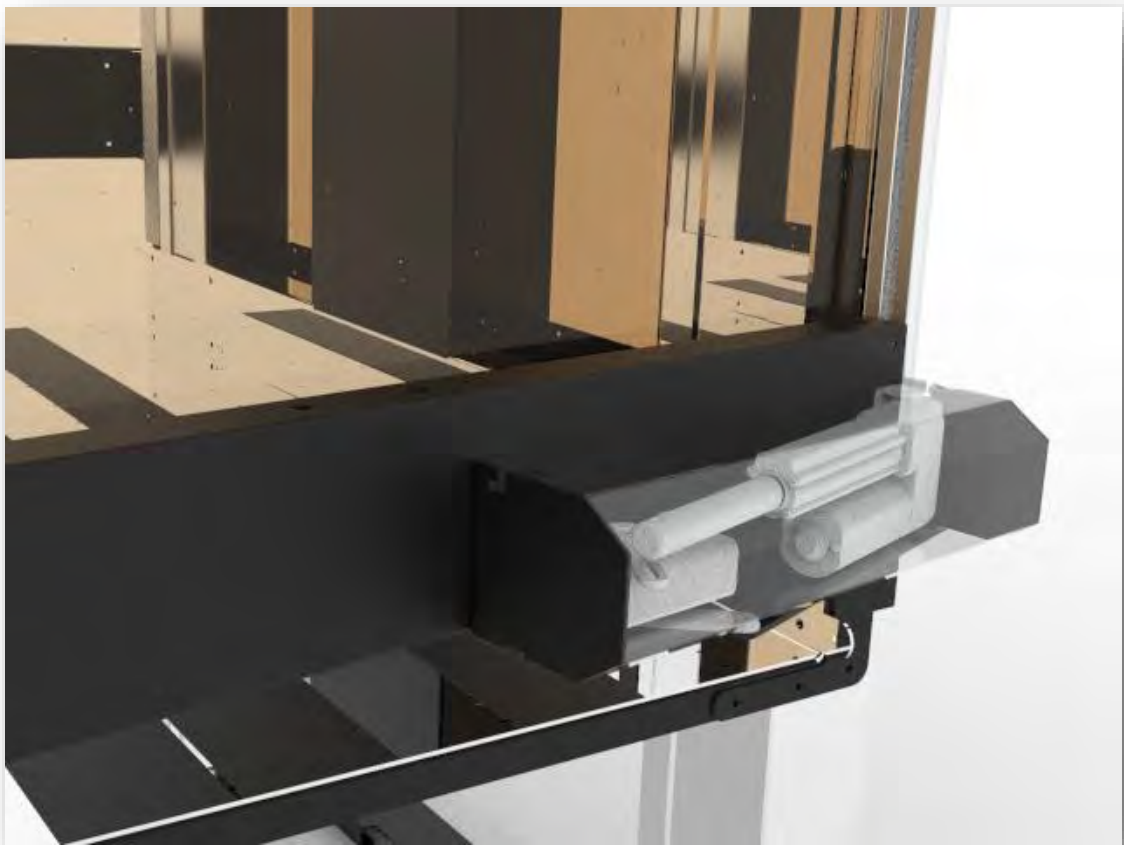

AUTOMATIC DOOR OPENER

For the Attention of:	Distributors
	Technician
Date:	2024-04-01
Product:	Tech Lift M4 and Tech Lift 500
Object:	Automatic door opener

Presentation:

We have developed a new automatic door to have even better functions.

Actions:

Tech Line's new door automation is based on a small and silent actuator that pushes with force in only one direction (push only), which means that the door can always be opened manually. Closing is done with a hydraulic spring that has an adjustable closing speed.

The door automation is equipped with a smart control board for control of soft start and stop, pulse operation and overcurrent protection.

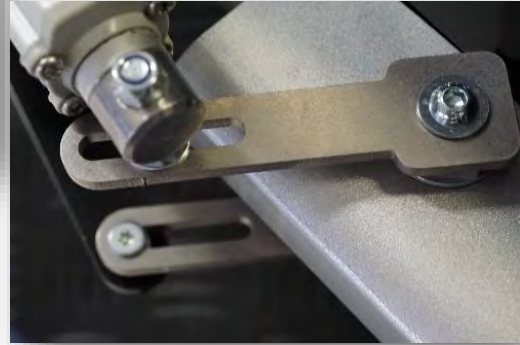

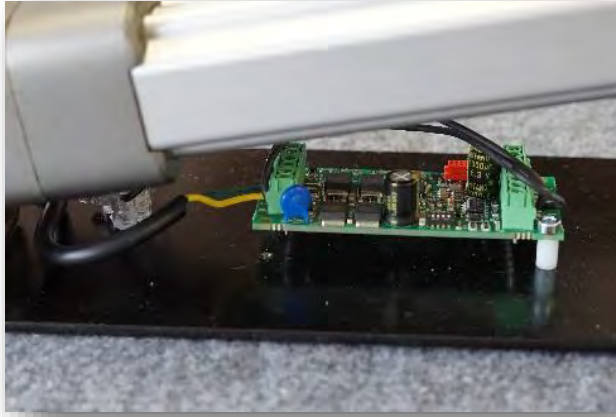

Stepless adjustment of door angle and opening force.

The new door automation can also be used on the Tech Lift 500 when it is equipped with a door.

Dimensions are: Length 375mm x Depth 110mm x Height 95mm and it builds 80mm outside the lift with the door open.
